

I'M A FIRE FIGHTER

It's woven into the fabric of who I am.

Protecting you in your professional pursuits is what we do at CarbonX. *It's woven into the fabric of who we are.*

Firefighters aren't the only professionals who face the threat of fire in their workplace. While standards and requirements for flame-resistant personal protective equipment may vary across industries and environments, the end goal remains the same: protect the skin and keep it from getting burned.

While competitors work to ensure their products meet industry standards, our goal at CarbonX is to exceed those standards and go above the norm in providing a persistent thermal barrier with minimal heat conductivity. CarbonX fabrics and apparel offer protection far beyond "No Melt, No Drip" requirements, which typically only specify that protective fabrics not contribute to burns in a thermal exposure as opposed to actually protecting the wearer from a thermal event.

CarbonX will keep you safe doing what you do every day.
