CARBON

I'M A RACER CARBON DRIVER

It's woven into the fabric of who I am.

Protecting you in your professional pursuits is what we do at CarbonX. *It's woven into the fabric of who we are.*

Whether drag racing at over 300 mph, skimming molten metal at 3,000 degrees, or working on energized switch gear at 38kV, often the most overlooked yet most effective defense against severe burn injuries is the baselayer garment.

With CarbonX® baselayer garments, hoods, gloves, and socks next to skin, professionals working in the world's most hazardous environments can face extreme heat and flame knowing they are equipped with the highest level of protection in the industry. Lightweight and comfortable, CarbonX baselayer gear is rated NFPA 70E Hazard Risk Category 2 or higher. But unlike similarly classified flame-resistant wear, CarbonX is truly non-flammable and maintains its strength and integrity even after intense exposure.

CarbonX will keep you safe doing what you do every day.
