

CARBON

# INVA SITEL WORKER

## It's woven into the fabric of who I am.

Protecting you in your professional pursuits is what we do at CarbonX. *It's woven into the fabric of who we are.*

CarbonX® with Z-Flex® Aluminization enhances both protection and comfort for individuals working in molten-metal and high-heat environments. Unlike other aluminized fabrics that can be rigid and heavy, CarbonX aluminized fabrics are flexible and lightweight yet still provide maximum temperature resistance and extraordinary protection against splash, spatter, and sparks. These fabrics incorporate the Newtex® proprietary Z-Flex MLA™ process, or multilayer aluminization, which delivers outstanding reflectivity, durability, and flex-bond.

CarbonX aluminized apparel can be worn daily with CarbonX baselayer products for a total PPE solution. All CarbonX fabrics are constructed to be truly non-flammable and provide persistent barrier protection.

CarbonX will keep you safe doing what you do every day. Visit the CarbonX booth (#1219) at the ASSE's Safety 2016 Expo, June 26–28, in Atlanta.
