

CARBON

I'M A WELDER

It's woven into the fabric of who I am.

Protecting you in your professional pursuits is what we do at CarbonX. *It's woven into the fabric of who we are.*

We manufacture innovative protective solutions designed to defend against numerous risks—big or small—because protecting you against any thermal hazard you may confront in your workplace is our top priority. In a welding, molten metal, flammable liquids, or hot chemicals environment, CarbonX® Repel™ delivers multifunctional protection unlike any other protective fabric. Sparks, spatter, and splash simply roll off the material, which also provides extraordinary protection against extreme heat and direct flame. Repel has a TPP rating of 9.0 cal/cm², an ATPV rating of 9.0 cal/cm², and is perhaps the only non-aluminized, flame-resistant fabric able to pass the ASTM F955 pour test for both molten iron and aluminum.

CarbonX Repel and the complete CarbonX product line will keep you safe doing what you do every day.
